

TRB WEB INFO

TRB WEB INFO

1. Keep the same domain

For example

<https://teamredbaron.com>

Don't change it.

When the new site is ready:

Old Hosting

↓

Point DNS

↓

New Hosting (Vercel)

Visitors won't even notice the switch.

3. Preserve SEO

This is the biggest mistake people make.

If your current page is

teamredbaron.com/about

your new site should also have

teamredbaron.com/about

Don't suddenly change it to

[/about-us](https://teamredbaron.com/about-us)

or

/our-story

unless you create proper **301 redirects**.

4. Add Metadata

Every page needs unique metadata.

Example

Home

Title

Team Red Baron | PCCOE Motorsports

Description

Official Formula Student team of PCCOE. Discover our race cars, sponsors, achievements and journey.

About

Team Red Baron | About

Sponsors

Team Red Baron Sponsors

Gallery

Formula Student Gallery

5. Open Graph Images

When someone shares

teamredbaron.com

on WhatsApp or LinkedIn,

they should see

- Logo
- Race car
- Team name

instead of a blank preview.

6. Fast Loading

Aim for:

- Lighthouse 95+
- Mobile friendly
- Lazy-loaded images
- WebP/AVIF images
- `next/image`
- Font optimization
- Server Components where possible

A fast site feels professional.

7. Professional Navigation

Example

Home

About

Cars

Journey

Achievements

Sponsors

Gallery

Recruitment

Shop

Contact

Sticky navbar

Smooth scrolling

Clear active page highlight

8. Contact Page

Include

- Email
- Phone
- Google Map
- Innovation Center location
- Social media icons
- Contact form

Looks much more trustworthy.

9. Professional Footer

Include

Quick Links

Sponsors

Instagram

LinkedIn

YouTube

Privacy Policy

Copyright

Designed by Team Red Baron

10. Google Search Console

After deployment

1. Verify ownership
2. Submit sitemap
3. Check indexing
4. Fix errors

This tells Google your site has changed.

11. Generate Sitemap Automatically

Example

/sitemap.xml

Google uses this to discover every page.

12. robots.txt

Allow Google to crawl your website.

User-agent: *

Allow: /

Sitemap:

<https://teamredbaron.com/sitemap.xml>

13. Structured Data (Schema.org)

This helps Google understand your organization.

Include:

- Organization
- Website
- Breadcrumb
- Logo
- Social links

This can improve how your site appears in search results.

14. Favicon

Have

- Browser icon
- Apple icon
- Android icon

Professional sites always include these.

15. SSL

Always use

<https://>

No browser security warnings.

16. Analytics

Install

- Google Analytics 4
- Google Search Console

Then you'll know

- Visitors
 - Most viewed pages
 - Search keywords
 - Device types
 - Traffic sources
-

17. Custom 404 Page

Instead of

404

Show

Looks like this page raced away.

Return Home →

It's a small touch that adds personality.

18. Loading States

Instead of blank screens

Show

- Car loading animation
- Skeleton loaders
- Smooth transitions

The website feels much more polished.

19. Optimize Images

Avoid uploading 8 MB DSLR images directly.

Use:

- WebP
 - AVIF
 - Responsive sizes
 - Lazy loading
-

20. Accessibility

Professional websites are accessible.

- Keyboard navigation
 - Good contrast
 - Alt text
 - Focus indicators
 - Semantic HTML
-

21. Performance Monitoring

After launch, test with:

- Google Lighthouse
- PageSpeed Insights
- GTmetrix

Fix anything that slows the experience.

22. Deployment Pipeline

A professional workflow is:

GitHub

Vercel Preview Deployments

Testing

Production Deployment

Domain (teamredbaron.com)

Every push creates a preview deployment, so changes can be reviewed before they go live.

Final launch checklist

- ☒ Domain connected
- ☒ HTTPS enabled
- ☒ Mobile responsive
- ☒ Metadata for every page
- ☒ Open Graph images
- ☒ `sitemap.xml`
- ☒ `robots.txt`
- ☒ Structured data
- ☒ Google Search Console verified
- ☒ Google Analytics installed
- ☒ Optimized images
- ☒ 404 page
- ☒ Fast loading (90+ Lighthouse)
- ☒ Accessibility checks
- ☒ Forms tested
- ☒ All links working
- ☒ Existing URLs preserved or redirected
- ☒ Social media previews working

If you're aiming for a portfolio-quality project, I can also give you a **professional deployment and launch plan** specifically for your **Next.js + Vercel + custom domain**

setup, covering everything from local development to production deployment, DNS, SEO migration, analytics, monitoring, backups, and ongoing maintenance.
